Hub, notably for bicycles and such like

Abstract

Hub, especially for bicycles and similar contrivances, comprising a hub axle and a hub shell mounted relative to said hub axle by means of roller bearings, whereby said roller bearings comprise roller bodies, each arranged at a predetermined distance to one another. Two adjacently disposed roller bearings are utilized for bearing and are situated at a narrow spacing from one another. Furthermore, it is possible to use a hollow hub axle configured such that an inner diameter of the hollow hub axle at a central position is larger than an outer diameter of the hub at an outer section, so provided for being inserted into a bicycle frame drop-out.
